

NEW DECATUR HIGH SCHOOL

DECATUR I.S.D.

"Your Tax Dollars at Work..."

Estimated Completion – June 2006

The new high school that is currently being built off of College Street will be a state of the art multi-use community and education facility. The total square footage of the building will be approximately 250,000 including the new vocational agricultural center and athletic field house.

The building is designed to include a three story educational wing with eight state of the art science labs equipped with computer connections available at each lab station within each classroom. The library will include a three story open student reading area with an attached single story technology learning center. Bookshelves will be made of solid oak, both ends and shelves, lending to the more professional university appearance. Each room will be wired to allow for internet connections, email, and a District-

wide phone system. The cafeteria, gymnasium, and auditorium are separate from the educational wing to allow separate public access. The auditorium will feature a separate orchestra pit, set against the stage, which is then connected to the fine arts and music center for easy access. The building will feature two separate gymnasiums, with separate seating, and a unique end zone area which includes a glass viewing area from the cafeteria and school area into the gym.

In addition to the building, the District is using bond proceeds to upgrade every building in the District, including an addition of modern classrooms at the middle school. Besides bond funds, the District is adding an additional approximate \$1.4M into the addition of computers, furniture, and communications to modernize all our facilities.
